(54) Title: METHOD FOR PRODUCING THIN FILM HEATING ELEMENT AND HEATING DEVICE USING SAME

(57) Abstract: A method of producing a thin film heating element is provided which can be used in manufacturing a transparent thin film heating element of desired shape with an increased heat emission property and an excellent durability. Also provided is a heating device of the type incorporating the thin film heating element produced by this method. The inventive method comprises the steps of, applying heat- and oil-resistant ink on a predetermined surface area of a base element, allowing the ink to run dry, spraying conductive chemical composition on the base element to form a conductive thin heater film, removing the ink out of the base element, printing a thin film electrode leading to the thin heater film, and baking the base element into a thin film heating element.
